Introduction

The Food-11 image dataset is a large, diverse, and well-organized collection of food images that can be used to train image classification models. I used this dataset to develop an AI project that can classify food images.

This dataset contains food images grouped into 11 major food categories: bread, dairy product, dessert, egg, fried food, meat, noodles-pasta, rice, seafood, soup, and vegetable-fruit.

Application

1. Food delivery services

2. Recipe recommendations

3. Food marketing
